The 1313 Empire Code: R and the Mal'ta site 22,000 BC at 52° N near Lake Baikal. The Number Hypothesis: 64, 34, 32, 20, 40, 26, 16, 15, and 247. / М. Илле — «Автор», 2026

The fact that the Empire 1313 code is discovered all over the world — this indicates that it was created in very deep antiquity. God Djehuty $67^3 + 17^3$ ($13^3 + 406^3$) / $13^3 = 149961908$ km. This name of the god gives the average distance to Earth, the Speed of light, and other things. Egypt Code. The Paleolithic Mal'ta site is located at the 52nd degree of north latitude (more precisely — 52°53' N). near Baikal about 130 km. If we accept these numbers 64 34 32 20 40 26 16 15 and 247 - then it turns out that people knew mathematics and astronomy at the level of the 20th century. The numbers say that they knew: The Galactic year, thermonuclear fusion, and other things. The problem is that these numbers are a reconstruction, the object on which these spirals with numbers were has losses of up to 33%. But knowing the approximate range of numbers the corridor of numbers, the named numbers were obtained through the logic of the Single cipher of the Empire 1313.

The 1313 Empire Code: R and the Mal'ta site 22,000 BC at 52° N near Lake Baikal. The Number Hypothesis: 64, 34, 32, 20, 40, 26, 16, 15, and 247.

Numbers

Check this first:

$67^3 + 17^3 (13^3 + 406^3) / 13^3 = 149,961,908 \text{ km}$ and $67^3 + 17^3 (13^3 + 406^3) / 7^3 = 958,917,487 \text{ km}$ — these are approximately the average distance from the Sun to the Earth and 1 revolution of the Earth around the Sun. At the same time, the first number is Jinn, the 7th letter of the Hebrew alphabet, the sum of 67 to the 3rd power is the speed of light + invisible inside; the 2nd number is the letter Chet (look up letter names). In one of the works, there is an explanation that the 22 letters of the Hebrew alphabet are mathematical formulas. The last two letters from Tatar are 'Ut' — meaning light or fire, or the Russian 'Utro' (Morning) — Ut Ra (the light-fire of the god Ra). Djehuty (*dḥwty*) = Jinn + Border of possession + Fire = Jinn + Chet + Ut.

"Utro" (Morning) and "Ut Ra," of course, might not be an ironclad proof, but they still fit beautifully into the overall structure. That is to say, one cannot claim there is nothing here or that all these arguments are empty.

The second type of numbers yields: Result: $53.90(((127^3 * 27^3) * 23^3) / 1606^3) / 13^3 = 53.90(((127^3 * (27^3 * 23^3)) / 1606^3) / 13^3 = 53.90(((127^3 * 27^3) * (23^3 / 1606^3)) / 13^3 = 53.90$

Astronomical correlation: The number of 54 years (more precisely, 54 years and 33 days) represents the Triple Saros (Exeligmos). This is the most crucial cyclical 'mediator' within the Sun-Earth-Moon system. After this period, eclipses repeat in the exact same hemisphere of the Earth and at virtually the same time of day.

The margin of error between the number derived from the mathematical formula (53.9037877592) and the astronomically precise cycle of the Exeligmos is about 0.186 years (or approximately 68 days). The error margin is a mere 0.34%.

Why is the Exeligmos so important? Return to the same hemisphere and time of day: One classic Saros cycle lasts approximately 18 years, 11 days, and 8 hours (or 6,585.32 days). Because of these "extra" 8 hours, the Earth manages to rotate by one-third of a full turn (120 degrees of longitude). Consequently, the next eclipse of the same Saros series occurs in a completely different part of the planet. **The magic of triple repetition:** If we multiply 8 hours by 3 (three Saros cycles), we get exactly 24 hours (a full day). Accordingly, after 3 Saros cycles (the Exeligmos), the longitudinal shift totals 360 degrees. The eclipse returns to virtually the same geographical location on Earth, the same hemisphere, and the same time of day.

The Battle of Ra against the Serpent Apep The Egyptians believed that an eclipse was the exact moment when the giant underworld serpent Apep (the personification of chaos and darkness) attacked the solar bark of the god Ra, attempting to swallow the Sun. **What did the priests and the people do?** Instead of executions, they organized massive, collective rituals of salvation. In the temples, priests chanted special incantations from the *Book of Overthrowing Apep*, burned wax figurines of the serpent, and cursed him. **Noise against the darkness:** Ordinary people in the streets

would shout loudly, beat drums, make noise, and perform ritual dances. It was believed that this clamor helped the forces of light (the gods Ra, Set, and Horus) defeat the serpent and force him to spit the Sun back out.

The Ritual of the "Substitute King" (Protecting the Monarch) In Mesopotamia (Babylon), it was believed that a lunar or solar eclipse foretold the imminent death of the ruling monarch. Since the Saros cycle allowed them to calculate the date of an upcoming eclipse in advance, the Babylonians developed a unique protective mechanism:

A few days before the calculated eclipse, the real king would temporarily abdicate the throne and go into hiding, disguised as a commoner.

A substitute person (usually a convicted criminal or a slave) was placed on the throne, dressed in royal attire, and addressed as the ruler.

All the "wrath of the gods" during the eclipse fell upon this false king. Once the danger had passed, the substitute ruler was executed (ensuring the prophecy was fulfilled), and the real king safely returned to power.

šar pūḫi (Shar Puhī) — 'Shar' is the boundary of decomposition. Word analysis: SHIN-ALEPH-RESH-BET-VAV-CHET-YOD (ח נ ב ר ש ו y)

X=10 | 350 + 111 + 501 + 11 + 13 + 17 + 14 = 1017 — established the maturity of Pi

X=20 | 1300 + 421 + 2001 + 21 + 23 + 27 + 24 = 3817 — the freshness and maturity of Pi Standard (Classic) | 300 + 1 + 200 + 2 + 6 + 8 + 10 = 527 — fiery chariot / final destination

Ordinal (Small) | 3 + 1 + 2 + 2 + 6 + 8 + 1 = 23 — pure light

Hidden (Integral) | 60 + 110 + 310 + 410 + 6 + 410 + 10 = 1316 — unity, protection, purification

Jinn + Chet + Ut. Word analysis: ZAYIN-CHET-VAV-TAV (ז ח ו ת)

X=10 | 67 + 17 + 13 + 406 = 503

X=20 | 127 + 27 + 23 + 1606 = 1783 — maturity of the mediator

Standard (Classic) | 7 + 8 + 6 + 400 = 421

Ordinal (Small) | 7 + 8 + 6 + 4 = 25

Hidden (Integral) | 60 + 410 + 6 + 6 = 482

Mal'ta Siberian Station:

"Golden Era": The lineage of the MA-1 boy (23,000 – 19,000 years ago)

This is the period of the heyday of the so-called Mal'ta-Buret archaeological culture. It was exactly then that the "tribe" of the boy with haplogroup R lived here.

Continuity of generations: Throughout these thousands of years, the exact same stable population (Ancient North Eurasians, ANE) continuously lived here. They built sturdy houses from mammoth bones and passed down unique art traditions from generation to generation — carving identical "Venuses" and waterfowl.

New timeline: Genetic and radiocarbon studies of recent years show that the culture lasted longer than previously thought. The departure of people from these places began around 19,000–15,000 years ago, when the tundra-steppe finally turned into a harsh icy hell.

The oldest real sample of the ancestral group P1 scientists found at the Yana site in Arctic Siberia (age about 31,600 years).

In 2001, Russian archaeologists discovered the Yana site — the oldest Paleolithic human site in the Arctic (beyond the Arctic Circle, 71° N). Permafrost conditions perfectly preserved the organic matter.

Genetic history of Siberia: how Baikal became the main station of humanity

Genetics and archaeology of recent years have proven: the ancestors of the boy from Mal'ta (Irkutsk Oblast) and the children from the Arctic Yana River did not arrive in Siberia from Europe. Their distant ancestors advanced from the south — through South and Southeast Asia and the territory of modern China.

Route of the great migration: Exit from Africa via the "Southern Route" (60–70 thousand years ago). Sapiens split. One wave settled Europe, while the ancestors of the future Siberians moved east along the coast of the Indian Ocean, settling in Southeast Asia. Their genetic traces are still found today in the indigenous people of the Andaman Islands and Malaysia.

Turn to the north (45–50 thousand years ago). In Asia, the macrogroup K2 was born, giving rise to the P lineage. The tribes began to move north into the interior of the continent. Archaeological evidence of this era is the Tianyuan cave man near Beijing (40,000 years old), who belonged to a parallel East Asian branch of K2b.

Settlement of Siberia and the Arctic (35–40 thousand years ago). Moving along river valleys, people settled the vast expanses of Siberia, where the paternal haplogroup P1 took shape. Its oldest carriers were discovered at the Yana site in the Arctic (31,000 years ago). They formed a unique population of Ancient Northern Siberians (ANS).

Why do Siberians have "European" markers? The discovery of a boy at the Mal'ta site near Baikal (age 24,000 years) shocked scientists: they found maternal haplogroup U and paternal R in him. The secret is that the P1 group split into two powerful branches — Q and R. Branch Q moved east, crossed Beringia and gave rise to the American Indians. Branch R (which gave rise to the majority of modern Europeans) developed in Siberia. Later, after the Last Glacial Maximum, the descendants of Siberian hunters (the ANE population) began a large-scale migration to the west. They brought Siberian bone-processing technologies to Europe and mixed with local Cro-Magnons, becoming one of the most important components in the DNA of modern Europeans. Summary: Paleolithic Siberia was not an isolated area, but a giant distribution hub. Coming from the subtropics of Asia, people adapted to the harsh climate of the mammoth tundra-steppe, and their descendants populated both the New World (group Q) and Europe (group R).
